

QA Engineer or Technician

Job Description

BlackRidge Technology is looking for an experienced QA Engineer or Technician to assist in testing our software security products. BlackRidge provides a game changing cyber and network security solution that cloaks and protects enterprise networks and new cloud and SDN environments. As part of the QA team you will support engineering and product support teams by configuring and testing hardware and software products.

Duties Include:

- Design, build and maintain SW and HW test environments
- Develop and execute tests to identify and document product defects
- Work with engineering team members to correct defects
- Train/mentor new hires in products and procedures

Desired Skills and Experience

- Bachelor's degree in engineering or science related field or other four year degree with related experience
- 3-4 years' experience in a technology related capacity, e.g. technical project mgmt., technical support, IT, hardware engineering, etc.; SW development and/or testing a plus
- Familiar with basic networking configuration and maintenance
- Experience with project mgmt. methodologies (Waterfall, Agile)
- Acquainted with software version control systems
- Working knowledge of MS Windows configuration and applications

Preferred Skills and Experience

- 5-7 years' experience (see above for specifics)
- Working knowledge of bug tracking/testing SW, Bugzilla, Testopia, Test Track, etc.
- Experience with Linux systems administration, including shell scripting, makefiles, tools
- Familiar with Linux-based, open source version control systems, e.g. CVS, SVN, GIT
- Experience with S/W testing automation

Additional Desired Qualifications:

- VMware experience a plus
- Scripting, e.g. Bash, Perl, Python, etc.
- Network performance testing experience using 3rd party tools, e.g. IXIA, iPerf, Spirent
