BlackRidge Technology and Alliance Technology Group to Bring Next Generation Cyber Security Solutions to Commercial and Government Markets

Companies also Integrated BlackRidge Identity-Based Security Protection into SentryWire Network Packet Capture Platform

Hanover, MD – **April 12, 2016** – BlackRidge Technology announces a new channel partner, Alliance Technology Group, a national solutions integrator delivering best in class security, cloud, and infrastructure solutions. The companies also announced that Alliance Technology Group has integrated BlackRidge identity-based network security with their SentryWire product offering.

"We are pleased to be working with Alliance Technology Group to address the security challenges in deploying enterprise workloads in public and hybrid clouds for both the Commercial and Government markets," said Mike Miracle, SVP Marketing and Strategy of BlackRidge Technology "Further, integrating BlackRidge identity-based security with their SentryWire product helps ensure that this leading packet capture platform is protected from advanced cyber and insider threats."

BlackRidge Technology provides identity-based network security that stops cyber-attacks and protects against insider threats at the earliest possible time, on the first packet before network sessions are established. This technology provides the equivalent of secure caller ID for the network that allows only identified and authorized users or devices access to enterprise and cloud systems.

Alliance Technology Group has integrated BlackRidge Technology's identity-based network security protection into the SentryWire next generation packet capture platform to protect SentryWire installations from insider and third party threats. SentryWire is a next-generation platform for network packet capture that is based on a unique capture and storage architecture which breaks the performance, scalability and expense barriers of existing frameworks.

"Alliance Technology Group is excited to be working with BlackRidge because their new and unique protection technology absolutely fits the "flexible, secure and reliable" solution mission of our company," said Josh Williams, VP Security of Alliance Technology Group. "BlackRidge does so by leveraging the investment in existing access and authorization technologies and extending identity authentication to network sessions, providing military grade security that integrates seamlessly with our solutions and at an entry-level price point."

BlackRidge Technology and Alliance Technology Group have started marketing their joint solutions to the commercial and government markets, including at a series of regional Cloud Security summits. Alliance Technology Group's SentryWire product with BlackRidge protection inside is now available from Alliance Technology Group. BlackRidge Technology is also a sponsor of the Alliance Technology Group National Sales Event being held April 12-14, 2016.

About BlackRidge Technology
BlackRidge Technology provides an identity-based network and cyber security solution that stops cyber-attacks and protects against insider threats. Our First Packet Authentication™ technology was developed for the military to cloak and protect servers and segment networks. BlackRidge Transport Access Control authenticates user and device identity and applies policy on the first packet of network sessions. This new level of real-time protection blocks or redirects unauthorized and unidentified traffic to stop known and unknown cyber-attacks, protects against insider and third party threats, and provides identity attribution. BlackRidge Technology was founded in 2010 to commercialize its military grade and patented identity-based network security technology. For more information, visit www.blackridge.us.

About Alliance Technology Group
Alliance Technology Group, a national solutions integrator, partners with Fortune 500 and government organizations to deliver best in class security, cloud, and infrastructure solutions. Alliance Technology builds and delivers solutions that transform technology infrastructure and Open Source innovation into flexible, secure, and reliable solutions. From the desktop to the cloud, we make IT easy.
SentryWire is the next generation platform for network packet capture that is based on a unique capture and storage architecture which breaks the performance, scalability and expense barriers of existing frameworks. SentryWire supports capture rates from 1Mbps to 100Gbps, while providing real-time filtering, and allowing retention of network traffic for months and even years at price points that can be as little as 20% of the cost of other systems.
